- Fishpond production 96 ton.
- Coast Fishpond area 4.945 Ha.
- Fishpond area 40 Ha.

Bireun is well known as one of aqua culture area, especially those cultured in coastal pond. Thousands of ponds are spread along Bireun coast, including those existing in Jangka, Gandapura and Samalanga districts. Due to large number of fish polder existing in this area, Asian Development Bank established 3 (three) Aqua Culture Livelihood Service Center (ALSC). This information center was developed to assist fish polder existing in the said three districts to be able to produce both qualified fish and prawn. ALSC is fully supported by Aceh Aqua Culture Community Center (AACC) located in Ujung Bateem Aceh Besar.

Aqua culture pond in Bireun produces windu prawn, milk fish, crab, and indigo fish.

INVESTMENT POTENTIAL

Bireun is categorized as regency sufficiently rich and complete in its natural resources, such as areca nut, oil palm and coconut up to cultured and caught fishes. One of the biggest produce of cultured pond area in Bireun is milk fish. Once again, unfortunately, there has no innovation for the most maximum economic result as possible for the milk fish, such as changing it into Bandeng Presto (pressured milk fish) or Smoked Milk Fish as mostly undertaken by fish polders and fish processing entrepreneurs in Central Java.
